

PROCESS MONITORING for woodworking machines

© HOLZ-HER

Will you detect this
fire hazard in time?

We have the solution to this problem:
Process monitoring by T&B electronic.

Continuous, precise monitoring of the tool's temperature using specialized infrared technology allows wear to be detected and visualized the moment it begins. This enables effective predictive maintenance and helps prevent fire risks while reducing scrap.

- Pre-alarm when an individually adjustable temperature is exceeded – for preventive tool replacement.
- Main alarm at defined temperature on the tool.
- Visualization via monitor or smartphone.

Allow us to advise you.
